

A. Statement of Compliance - Licence Details

ALL Licence holders must check that the Licence details in Section A are correct.

If there are changes to any of these details, **you must advise Environment Protection Authority (EPA) and apply as soon as possible for a variation to your Licence or for a Licence transfer.**

Licence variation and transfer application forms are available on the EPA website at:
<http://www.epa.nsw.gov.au/licensing-and-regulation/licensing> or from regional offices of the EPA, or by contacting by telephone 02 9995 5700.

If you are applying to vary or transfer your Licence, you must still complete and submit this Annual Return.

A1. Licence holder

Licence number : 5875
Licence holder : GRIFFITH CITY COUNCIL
Trading name (if applicable) :
ABN : 81 274 100 792
ACN :
Reporting period : From: 11-9-2017 To: 10-9-2018

A2. Premises to which Licence Applies (if applicable)

Common name (if any) : THARBOGANG RECYCLING AND WASTE DISPOSAL FACILITY
Premises : HILLSIDE DRIVE THARBOGANG 2680 NSW

A3. Activities to which Licence Applies

Extractive activities
Waste disposal (application to land)

A4. Other Activities (if applicable)

A5. Fee-Based Activity Classifications

Note that the fee based activity classification is used to calculate the administrative fee.

Fee-based activity	Activity scale	Unit of measure
Waste disposal by application to land	> 0.00	capacity
Land-based extractive activity	> 30,000.00 - 50,000.00	T annual capacity to extract, process or store

A6. Assessable Pollutants (if applicable)

Note that the identification of assessable pollutants is used to calculate the **load-based fee**.

The following assessable pollutants are identified for the fee-based activity classifications in the licence:

B. Monitoring and Complaints Summary

B1. Number of Pollution Complaints

Pollution Complaint Category	Complaints
Air	0
Water	0
Noise	0
Waste	0
Other	0
Total complaints recorded by the licensee during the reporting period	0

B2. Concentration Monitoring Summary

For each concentration monitoring point identified in your licence, details are displayed below. If concentration monitoring is not required by your licence, **no data** will appear below.

If data was provided from an uploaded file, the file name will be displayed below instead of any data.

Note that this does not exclude the need to conduct appropriate concentration monitoring of assessable pollutants as required by load-based licensing (if applicable).

Monitoring Point 1

Groundwater Quality Monitoring, Borehole 1 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier', dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					

Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					
Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 3

Groundwater Quality Monitoring, Borehole 3 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier', dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					
Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					

Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					
Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 4

Groundwater Quality Monitoring, Borehole 4 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier' dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					
Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					

Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					
Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 5

Groundwater Quality Monitoring, Borehole 5 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier', dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					
Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					

Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 6

Groundwater Quality Monitoring, Borehole 6 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier', dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					
Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					
Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 7

Groundwater Quality Monitoring, Borehole 7 as shown on map titled 'Tharbogang Landfill boreholes and leachate barrier', dated 27 Sep 2006 on DEC file 235451A1/07.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Total organic carbon	milligrams per litre					
pH	pH					
Fluoride	milligrams per litre					
Chloride	milligrams per litre					
Sulfate	milligrams per litre					
Manganese	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Sodium	milligrams per litre					
Potassium	milligrams per litre					
Ammonia	milligrams per litre					
Conductivity	microsiemens per centimetre					
Calcium	milligrams per litre					

Monitoring Point 8

Surface Water Quality Monitoring, Sedimentation basin as outlined in Appendix 21 of the LEMP.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Iron	milligrams per litre					
Chloride	milligrams per litre					
Sodium	milligrams per litre					
Calcium	milligrams per litre					
Nitrate	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Potassium	milligrams per litre					
Total suspended solids	milligrams per litre					
Fluoride	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Conductivity	microsiemens per centimetre					
Manganese	milligrams per litre					
pH	pH					
Sulfate	milligrams per litre					
Total organic carbon	milligrams per litre					
Ammonia	milligrams per litre					
Magnesium	milligrams per litre					
Total Phenolics	milligrams per litre					

Monitoring Point 9

Leachate runoff, Leachate holding pond as outlined in Appendix 21 of the LEMP.

Pollutant	Unit of measure	No. of samples required	No. of samples collected and analysed	Lowest sample value	Mean of sample	Highest sample value
Total Phenolics	milligrams per litre					
Alkalinity (as calcium carbonate)	milligrams per litre					
Chlorinated volatile compounds	milligrams per litre					
Potassium	milligrams per litre					
Total suspended solids	milligrams per litre					
Ammonia	milligrams per litre					
Calcium	milligrams per litre					
Chloride	milligrams per litre					
Fluoride	milligrams per litre					
Iron	milligrams per litre					
Nitrate	milligrams per litre					
Manganese	milligrams per litre					
pH	pH					
Sodium	milligrams per litre					
Sulfate	milligrams per litre					
Total organic carbon	milligrams per litre					
Magnesium	milligrams per litre					

Name of the uploaded file containing point data ▼

Ground Water Analysis for Tharbogang for Web.pdf

B3. Volume or Mass Monitoring Summary

For each volume or mass monitoring point identified in your licence, details are displayed below. If volume or mass monitoring is not required by your licence, **no data** will appear below.
 If data was provided from an uploaded file, the file name will be displayed below instead of any data.
Note that this does not exclude the need to conduct appropriate volume or mass monitoring of assessable pollutants are required by load-based licensing (if applicable).

C. Statement of Compliance - Licence Conditions

C1. Compliance with Licence Conditions

Were all conditions of the licence complied with (including monitoring and reporting requirements)?	Yes
---	-----

D. Statement of Compliance - Load Based Fee Calculation

If you are not required to monitor assessable pollutants by your licence, **no data** will appear below.

If assessable pollutants have been identified on your licence, the following worksheets for each assessable pollutant will determine your load based fee for the licence fee period to which this Annual Return relates.

Loads of assessable pollutants must be calculated using any of the methods provided in EPA's Load Calculation Protocol for the relevant activity. A Load Calculation Protocol would have been already sent to you with your licence. If you require additional copies, you can download the Protocol from the EPA's website or you can contact us on telephone 02 9995 5700.

You are required to keep all records used to calculate licence fees for four years after the licence fee was paid or became payable, whichever is the later date.

E. Statement of Compliance - Requirement to Prepare PIRMP

Have you prepared a Pollution Incident Response Management Plan (PIRMP) as required under section 153A of the Protection of the Environment Operations (POEO) Act 1997?	Yes
Is the PIRMP available at the premises?	Yes
Is the PIRMP available in a prominent position on a publicly accessible website?	Yes
Address of the web page where the PIRMP can be accessed ▼	
https://www.griffith.nsw.gov.au/cp_themes/default/page.asp?p=DOC-KCB-52-46-17	
Has the PIRMP been tested?	Yes
The PIRMP was last tested on	20-8-2018
Has the PIRMP been updated?	Yes
The PIRMP was last updated on	20-8-2018
Number of times the PIRMP was activated in this reporting period?	0

The PIRMP was activated on

F. Statement of Compliance - Requirement to Publish Pollution Monitoring Data

Are there any conditions attached to your licence that require pollution monitoring to be undertaken as required under section 66(6) of the Protection of the Environment Operations (POEO) Act 1997?	Yes
Do you operate a website?	Yes
Is the pollution monitoring data published on your website in accordance with the EPA's written requirements for publishing pollution monitoring data?	Yes
Address of the web page where the pollution monitoring data can be accessed ▼	
https://www.griffith.nsw.gov.au/cp_themes/default/page.asp?p=DOC-KCB-52-46-17	

G. Statement of Compliance - Environment Management System and Practices

Do you have an ISO 14001 certified Environmental Management System (EMS) OR any other system that EPA considers is equivalent to the accountability, procedures, documentation and record keeping requirements of an ISO 14001 certified EMS?	No
Have you conducted an assessment of your activities and operations to identify the aspects that have a potential to cause environmental impacts and implemented operational controls to address these aspects?	No
Have you established and implemented an operational maintenance program, including preventative maintenance?	No
Do you keep records of regular inspections and maintenance of plant and equipment?	Yes
Do you conduct regular site audits to assess compliance with environmental legal requirements and assess conformance to the requirements of any documented environmental practices, procedures and systems in place?	No
Are the audits of documented environmental practices, procedures and systems undertaken by a third party?	No
Have you established and implemented an environmental improvement or management plan?	No
Do you train staff in environmental issues that may arise from your activities and operations and keep records of this	Yes

H. Signature and Certification

This Annual Return may only be signed by person(s) with legal authority to sign it as set out in following categories: an Individual, a Company, a Public authority or a Local council.

It is an offence to supply any information in this form that is false or misleading in a material respect, or to certify a statement that is false or misleading in a material respect. There is a maximum penalty of \$250,000 for a corporation and \$120,000 for an individual.

I/We

- declare that the information in the Monitoring and Complaints Summary in Section B of this Annual Return application is correct and not false or misleading in a material respect, and
- certify that the information in the Statement and Compliance in sections A, C, D, E, F, G and H and any other pages attached to Section C is correct and not false or misleading in a material respect.

Signed by: General Manager

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

ø = ALS is not NATA accredited for these tests.

~ = Indicates an estimated value.

- EA010-P: Electrical Conductivity @ 25°C was analysed by manual method (EA010).
- EP075(SIM): There are no phenols detected above LOR for sample EM1813395-001.
- Ionic balances were calculated using: major anions - chloride, alkalinity and sulfate; and major cations - calcium, magnesium, potassium and sodium.
- Ionic balances were calculated using: major anions - chloride, alkalinity, sulfate and nitrate; and major cations - calcium, magnesium, potassium and sodium for sample #1.
- ED045G: The presence of thiocyanate can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.
- There are no VHCs detected above the LOR for sample EM1813395-001.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benzo(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1,2,3,cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
Dilani Fernando	Senior Inorganic Chemist	Melbourne Inorganics, Springvale, VIC
Nikki Stepniewski	Senior Inorganic Instrument Chemist	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

Client : GRIFFITH CITY COUNCIL
Project : 152306/284

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

ø = ALS is not NATA accredited for these tests.

~ = Indicates an estimated value.

- EA010-P: Electrical Conductivity @ 25°C was analysed by manual method (EA010).
- Ionic balances were calculated using: major anions - chloride, alkalinity and sulfate; and major cations - calcium, magnesium, potassium and sodium.
- Ionic balances were calculated using: major anions - chloride, alkalinity and sulfate; and major cations - calcium, magnesium, potassium, sodium and ammonia for sample #2.
- ED045G: The presence of thiocyanate can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benzo(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1,2,3,cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
Dilani Fernando	Senior Inorganic Chemist	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

o = ALS is not NATA accredited for these tests.

~ = Indicates an estimated value.

- EK040P: EM1805140 #13 Poor matrix spike precision for Fluoride by PC titrator due to sample heterogeneity. Confirmed by re-analysis.
- EP074/080: Surrogate recoveries for sample (EM1805115_008) fall outside of published limits as a result of suspected matrix interferences. Surrogate recoveries have been confirmed by re-analysis.
- EA010: EM1805115-8 EC result is greater than the highest calibration point. Scrutinise result accordingly.
- ED093F:EM1805115_006 has been confirmed for major cations by re-preparation and re-analysis.
- Ionic balances were calculated using: major anions - chloride, alkalinity and sulfate; and major cations - calcium, magnesium, potassium and sodium.
- Ionic balances were calculated using: major anions - chloride, alkalinity, sulfate and nitrate; and major cations - calcium, magnesium, potassium, sodium for #6.
- ED045G: The presence of thiocyanate can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1,2,3,cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.

Annual Report Tharbogang Recycling and Waste disposal Facility Griffith City Council

Statement of Compliance

3 Limit Conditions

L1 Pollution of Waters

All stormwater that falls on the active Landfill and Quarry sites is contained on site. Leachate is contained on site.

L2 Waste

Total tonnage of waste did not exceed 100,000 tonnes
Total of waste landfilled within the reporting period was 31742 tonnes.

Council still is still committed to removing products off site for recycling where practicable and sustainable. Within this reporting period a total of 766.71tonnes of recyclable materials were removed off site.

L3 Noise Limits

No noise levels have been recorded during the reporting period.

L4 Blasting

All blasting is monitored for vibration and noise at the closest residents to the Quarry, a copy of the following blast replated information is kept in Council document management system;

- Explosive Inventory Worksheet;
- Blast Pre Check ;
- Tool Box Talk;
- Dangerous Good Shipping Document;
- Blast Monitor results;
- Photo of monitor;
- Notice of Blast (surrounding neighbours);
- Orica Delivery Docket;
- Blast Pattern.

There was one blast carried out within this reporting period this was on the 11/10/17.

L5 Hours of Operation

Hours of operation not exceeded.

4 Operating Conditions

O2 Maintenance of Plant and Equipment

The landfills operational plant consists of the following items:

- 26 tonne Tana Compactor purchased in 2009;

- 20 tonne Liebherr Traxcavator purchased in 2015;
- 5.5 tonne Liebherr Stereoloader purchased in 2012;
- International ACCO, tipper truck with removal water cart;
- Two 4wd utes;
- Mercedes Benz Actros 8x4 Hook Lift Truck 20015.

Plant and equipment are inspected daily by landfill operational staff. Maintenance such as greasing and air filter checks are also carried out by landfill operational staff. If a breakdown occurs, then council mechanics are called. The mechanics will then decide if the factory service mechanics will be called to rectify the breakdown.

O3 Dust Control

Dust abatement controlled by use of Council water cart. Operations cease when weather conditions, especially in periods of extreme winds conditions, cause low visibility.

There has been a dust suppression system installed at the quarry. This was installed at the beginning of 2013.

In early 2015 council established two 22,000lt water tanks (along with water refilling capabilities) these were put in strategic locations around the landfill site so water carts and other water dependant vehicles don't have far to travel to refill.

The pump that services the water tanks and dust suppression in the quarry was replaced in late 2017.

In January 2018 500mtrs of previously gravelled road was sealed, this newly seal section is the access road to the current landfill. There is now a total of 1.8km's of sealed internal road son site at TWMC.

O4 Emergency Response

Fire breaks maintained by landfill operation staff with landfill plant.

If a fire starts in a landfill cell the burning waste will be separated with landfill plant. The water cert will be brought in and used to extinguish the fire.

The landfill has on site a 5,000L water cart that has a hydraulic pump/spray unit. The landfill operations staff can also call on the Rural Fire Service and other council plant available, if required.

The Rural Fire Service responds to any landfill fires and other council departments provide resources when required.

O5 Processes and Management

O5.1 Maintenance of Sedimentation of Leachate Holding Pond

The construction has been completed for the Stormwater, Sedimentation and Leachate ponds. Resulting in a more formalised contaminant system

O5.2 Management of Surface Water

Dry conditions prevailed, contour banks maintained to divert any runoff. As part of the stormwater redesigned and construction project, new cut off drains, culverts and piped drains have been constructed.

The drainage swale that delivers the stormwater runoff in to the Sedimentation Pond was reinstated, the swale outlet was also desilted in the process.

Unauthorised Entry

- O5.3** All outer access gates to the Waste Management Site have pad locks on them.
- O5.4** The perimeter fence line is kept as a serviceable condition.
- O5.5** There is no 1.8m high mesh fence around the active tipping area, due to the fluid nature of the active tipping area Council uses litter fences these are mobile and are able to be relocated when the active tipping area changes.

O5.6 All outer access gates are secured and maintained, there is a CCTV system at the Waste Transfer Station, Front Gate and the Weighbridge this is all integrated to a central server.

O5.7 The Waste Management Site is secured by the last employee to leave every afternoon.

O5.8 Degradation of Local Amenity
Litter on site is collected by staff.

O5.9 Control of pests, vermin and weeds

There was no feral animal eradication carried out in this reporting period.

There was a total of 511tn's of Prickly Pear removed for the Waste Management Site and disposed of into Landfill.

There was a total of 19.1tn's of Box Thorne removed for the Waste Management Site and disposed of into Landfill.

O5.10 Staff Training

Staff have appropriate licences, permits and signed log books. Council's Human Resources department monitor and implement training as required.

O6 Waste Management

Leachate Disposal

There has been no Leachate Disposed, it what leachate is generated is contained and natural evaporation takes place.

O6.6 Screening of Waste

When waste is brought to the landfill, loads are checked at the weighbridge by the weighbridge staff. Which waste category the load fall in is determined by the weighbridge operator, the public is then directed to the appropriate areas to unload waste.

O6.7 Waste Compaction

Compaction rate is estimated at 630 kg/m³, with the purchase of the new compactor it is thought that greater compaction is being achieved.

O6.9 Filling Plan

A filling plan has been design this has been provided to the Local EPA office.

O6.10 Completion of Landfill Cells

Compaction rate is estimated at 630 kg/m³, with the purchase of the new compactor it is thought that greater compaction is being achieved.

O6.11 Final Capping

Compaction rate is estimated at 630 kg/m³, with the purchase of the new compactor it is thought that greater compaction is being achieved.

O6.12 Closure Plan

There is no Closure Plan for the current Landfill.

O6.13 Burning of Green Waste

The burning of green waste hasn't occurred for some time. All green waste is now mulched and used for cover material on site.

O6.14 Covering of Waste

The full area is not covered daily, but is compacted at the end of each day. Council progressively covers waste maintaining minimum area exposed to 1,000 to 2,000m². The system still appears to meet the goals of preventing fires in the waste, controlling vermin and achieving good compaction.

O6.16 & O6.17 Biosolids and Green Waste Pad

The Green waste pad has not been constructed as yet the design has been completed, waiting for suitable material for an impermeable pad. The majority of the Biosolids are disposed of into Landfill when this can't occur a designated pad has been constructed for this purposes.

5 Monitoring and Recording Conditions

M1 & M2

As a result of the required ground water hydrological investigation, it was deemed that the removal of the Pollution Reduction Program condition (U1) and the removal of BH2 from the biannual ground water monitoring program. For details of the Licence variation please note; EPA document reference EF 13/3014; Doc15/496225, 15/87918 Council record number.

When the 1st set of ground water samples was taken in early August 2018, it was noticed that the sleeve around BH7 was damaged which made sampling impossible.

A contractor was engaged to repair BH 7. (6/8/18)

BH7 was sampled at the end of August (23/8/18)

M3 Testing Methods

Testing is carried out by Council staff with suitable water and ground water experience.

M4 Recording of Pollution Complaints

All testing results are saved in Councils document management system.

M5 Other Monitoring and Recording Conditions

All complaints are recorded on Councils Complaint Management System

M6 Other Monitoring and Recording Conditions

Surveys are carried out regularly on the current landfill which provides information of the remaining air space of the landfill.

6 Reporting Conditions

R1 Annual Return Documents

The annual return has been completed as required.

R2 Notification of Environmental Harm

Nil

R3 Written Report

Nil

R4 Recording of Fires

There was a fire at Tharbogang Waste Management Centre in the active tipping cell on the 19/2/18; the extreme wind made it challenging to extinguish.

The local EPA office was notified and sent the incident report (18/36079 Council record number) on the 21/2/18.

1. Introduction

1.1. Project Background

Griffith City Council (Council) operates the Tharbogang Waste Management Centre (TWMC), located at Lot 202 DP 756035 Hillside Drive, Tharbogang. The Facility has been in operation since 1984.

Expansion of the landfilling and quarrying operations received Ministerial approval in July 2010, but it has not yet commenced. The approval allows Council to extract up to 315,000 tonnes per year of gravel and landfill 35,000 tonnes per year of general solid waste. The project approval has been modified twice. These modifications are detailed later in this plan. The quarry and landfill operation will also require an updated Environmental Protection Licence (EPL) from the Environment Protection Authority (EPA).

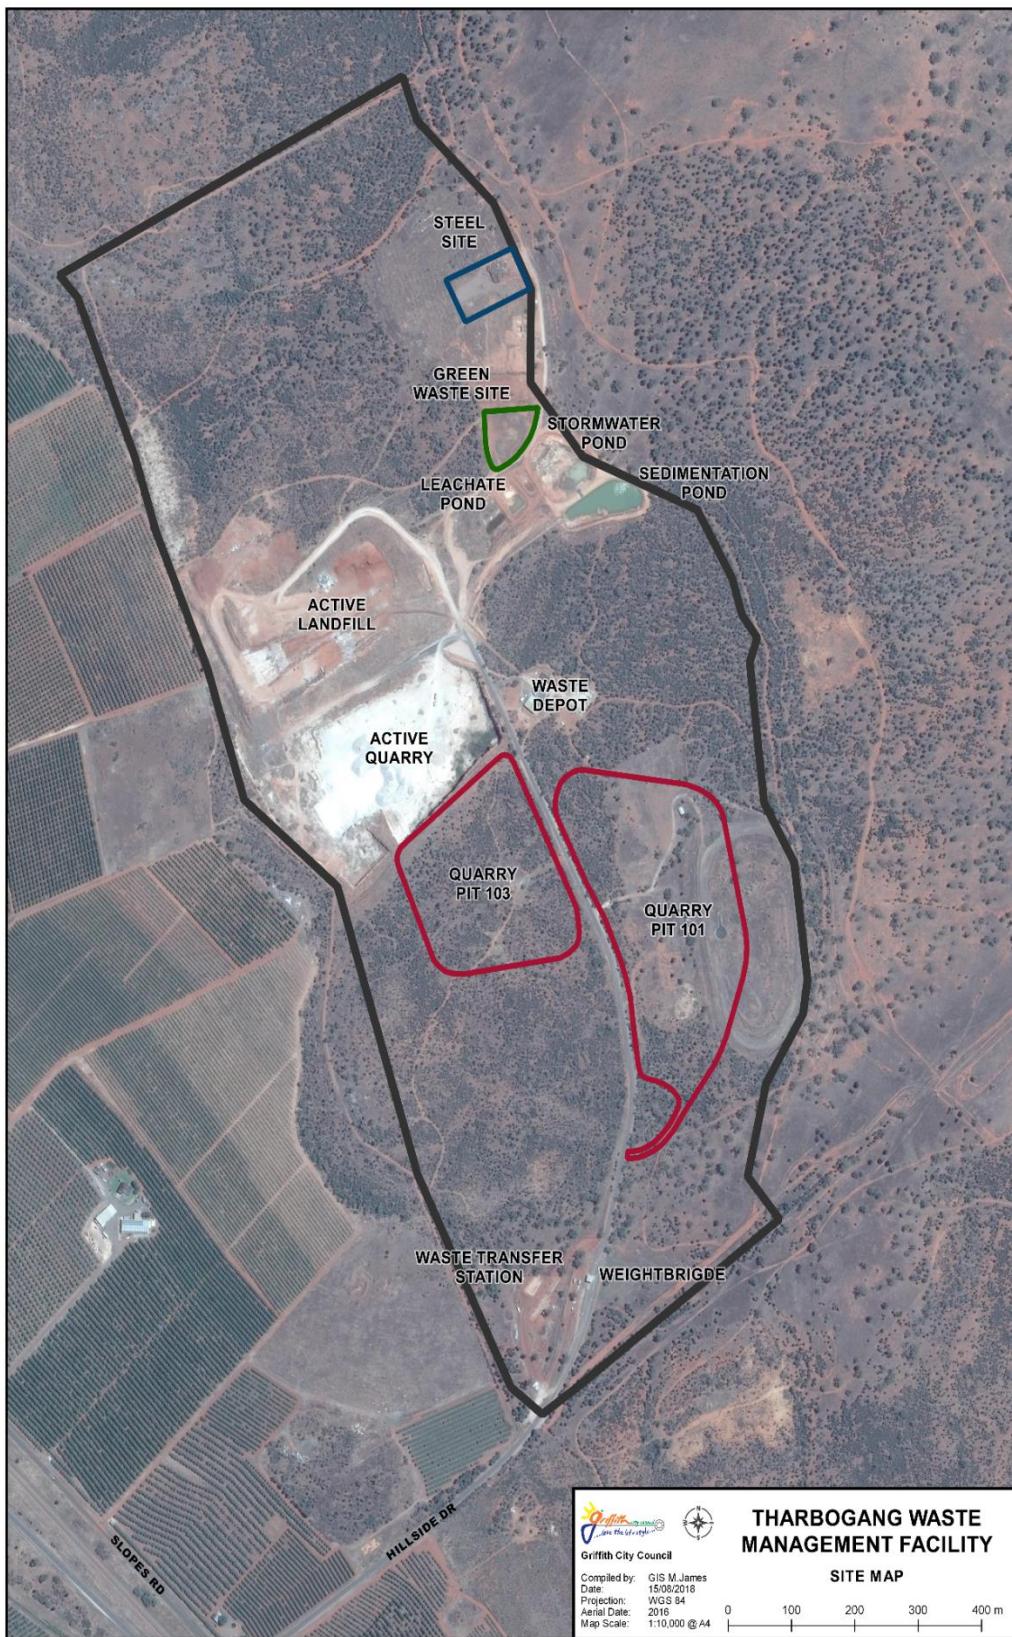

1.2. Purpose of the Report

This report summaries the Environment Performance of Tharbogang Waste Management Centre for the reporting period 11 September 2017 to 10 September 2018.

Figure 1-1 Location of Tharbogang Waste Management Centre in relation to the City Centre

Figure 1-2 Tharbogang Waste Management Centre Site Layout

**THARBOGANG WASTE
MANAGEMENT FACILITY**

Compiled by: GIS M.James
Date: 15/05/2018
Projection: WGS 84
Aerial Date: 2017
Map Scale: 1:10,000 @ A4

0 100 200 300 400 m

2. Landfill Operation

2.1. Tharbogang Landfill Disposal

Table 2.1 shows the waste disposal rate (in tonnes) and the amount of waste diverted from landfill over a four year period within the same reporting term (11 September 2017 to 10 September 2018).

Table 2-1

Year EPA Reporting Period	Waste to Landfill	Waste Recycled
17/18	31742	767
16/17	31185	544
15/16	33512	424
14/15	27024	242

Rainfall

Table 2.2 shows the rainfall for in the Griffith Region over the past four year period.

Table 2.2:

Year EPA Reporting Period	Rain fall (mm)
17/18	289
16/17	423
15/16	581
14/15	412

Between the sampling dates March 2018 and August 2018, there was a total of 76mm of rain fall.

As you can see, there is very little rainfall over the last 4 years and even less fall in between the groundwater sampling dates.

Note: Data obtained from the CSIRO Web Site.

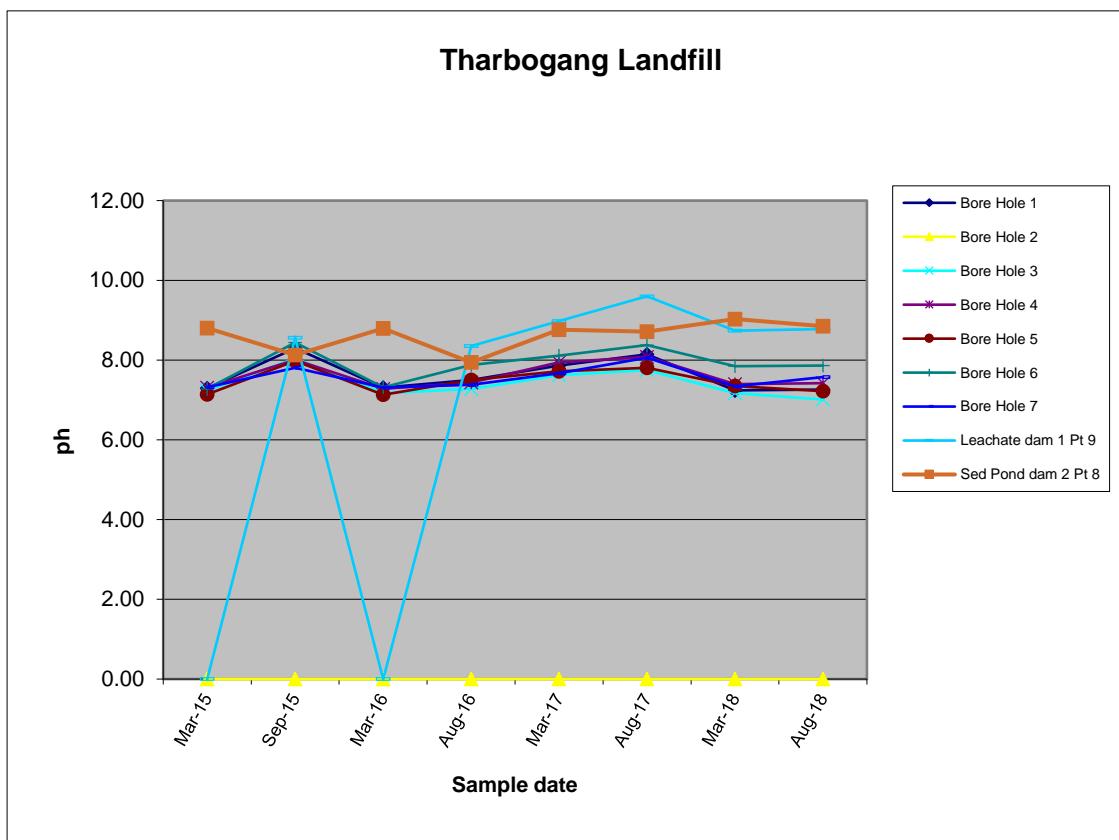

Figure 2-1 Groundwater Monitoring Bore Locations as at September 2018

The following graphs are a four year summary of the ground water testing analysis

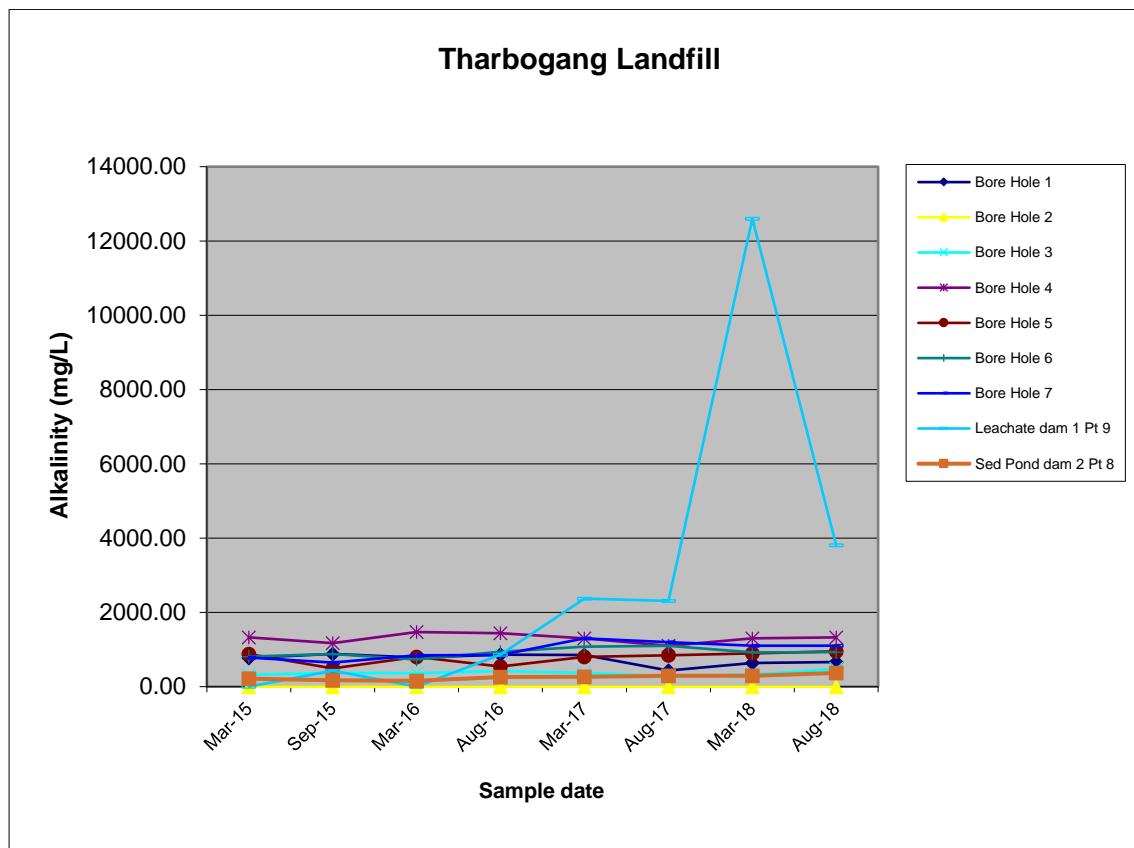

- a) The TWMC environmental performance was compliant in all aspects relevant to the licence conditions.
- b) Tabulated data has been submitted as part of the Annual Return.
- c) Below is the graphical presentation of the data for the past three years

Graph 2-1 pH

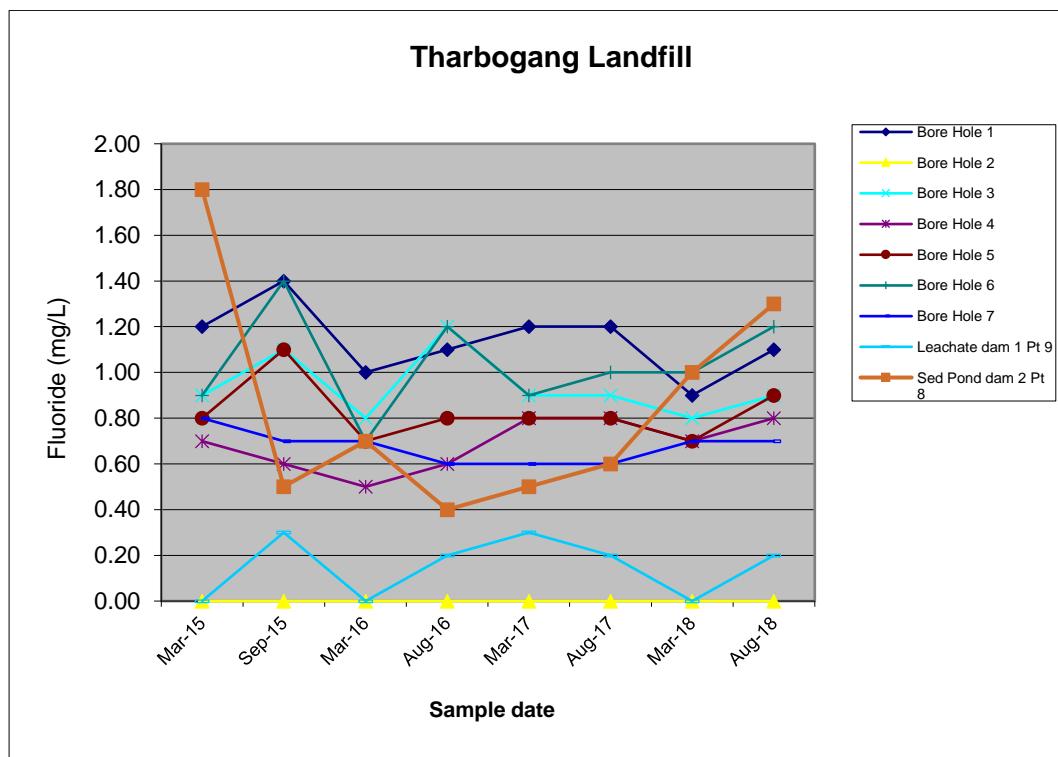

Comments: None

Graph 2-2 Alkalinity

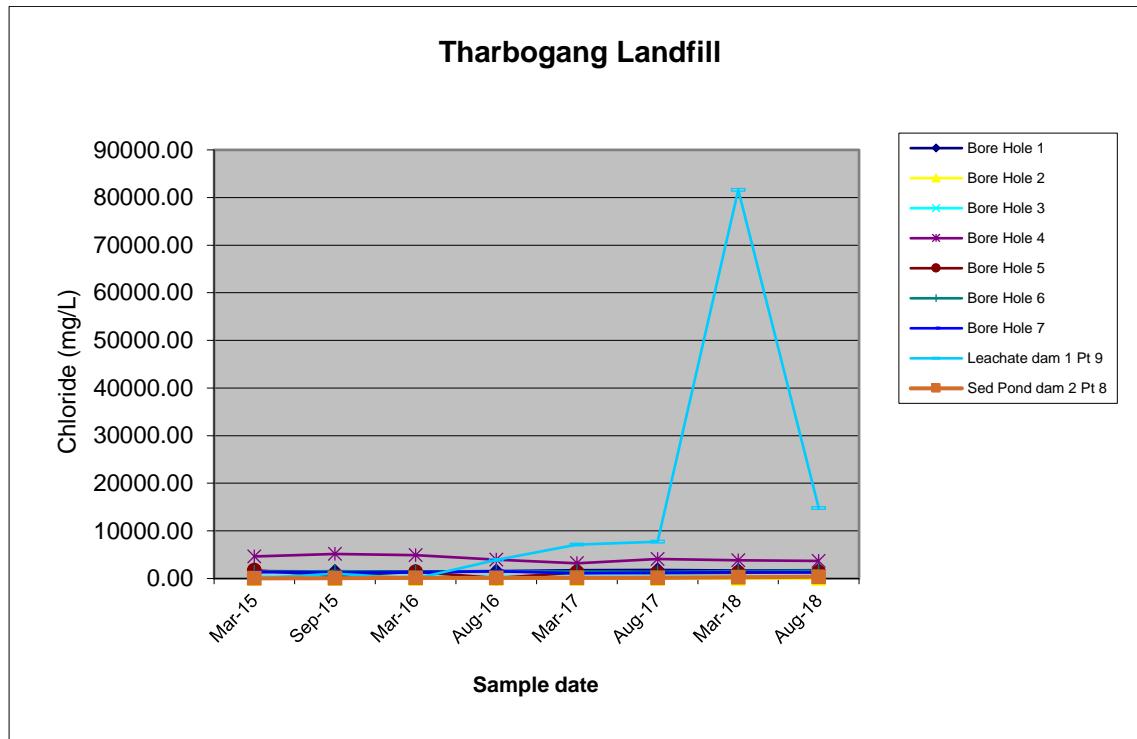

Comments: Alkalinity rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-3 Fluoride

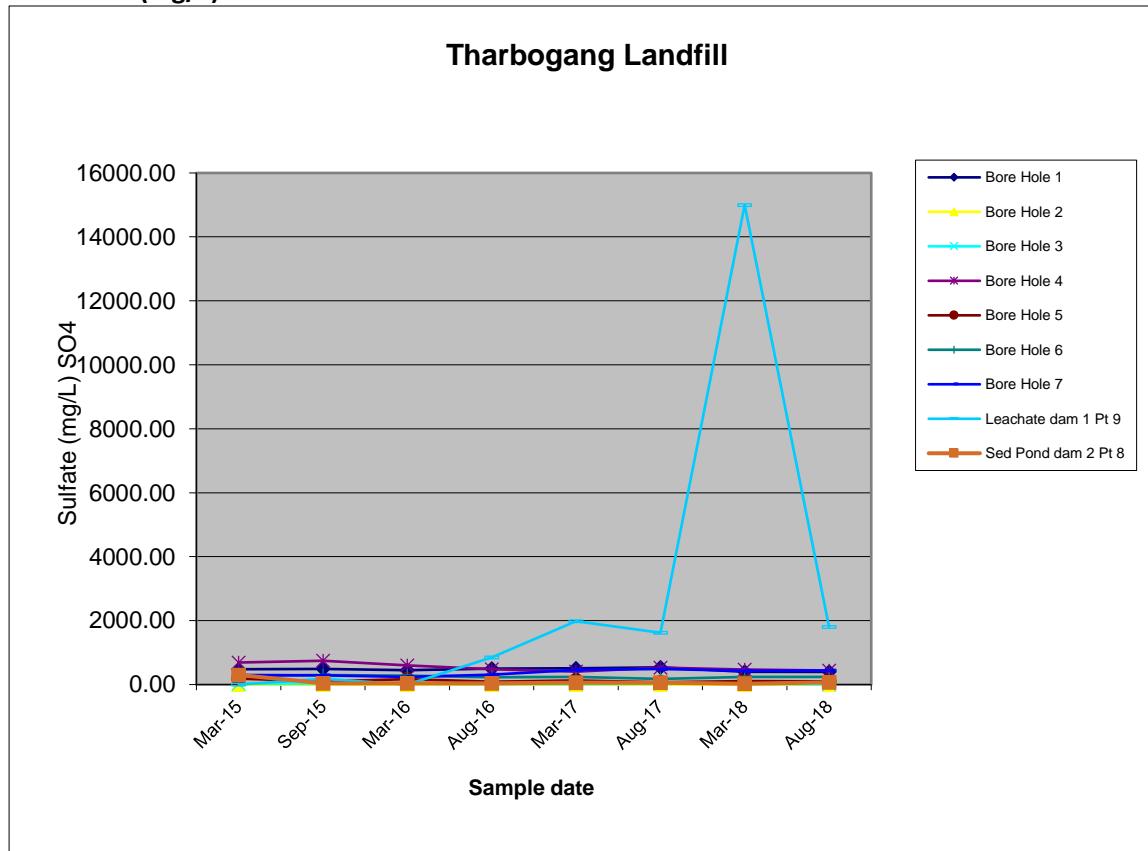

Comments: None

Graph 2-4 Chloride

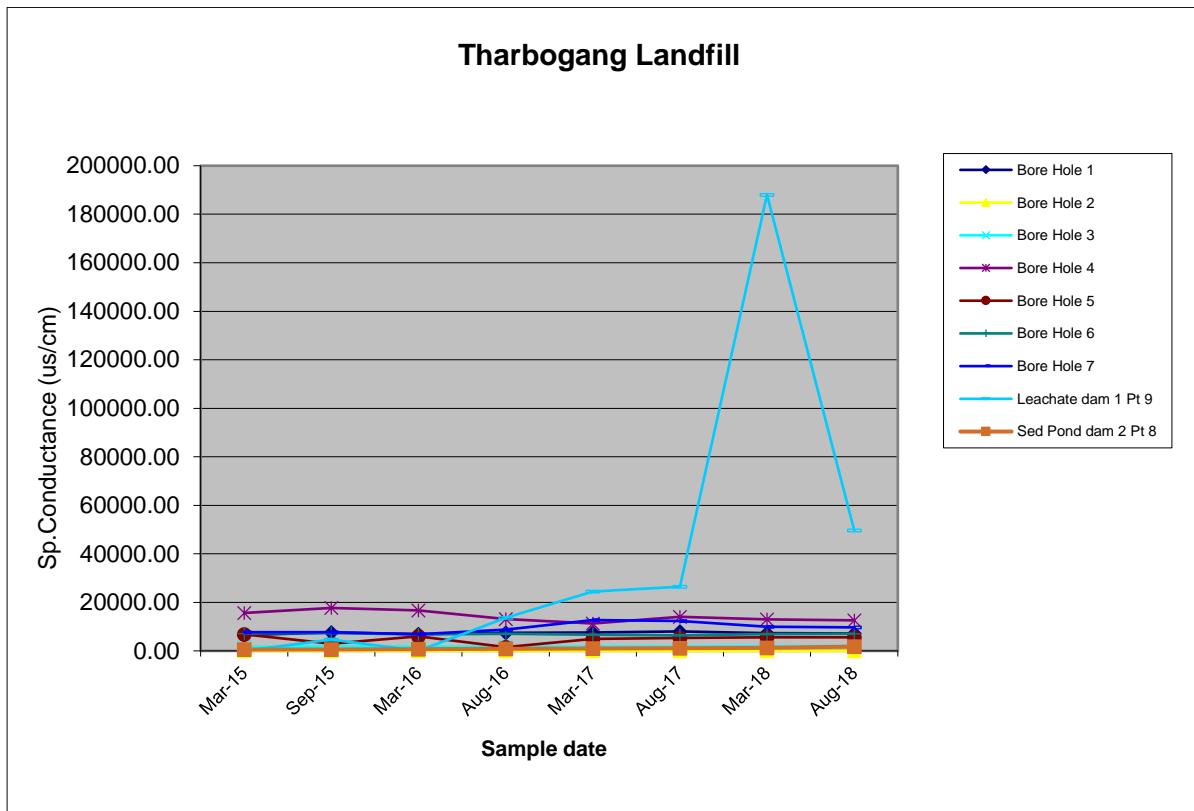

Comments: Chloride rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-5 Sulfate (mg/L) SO₄

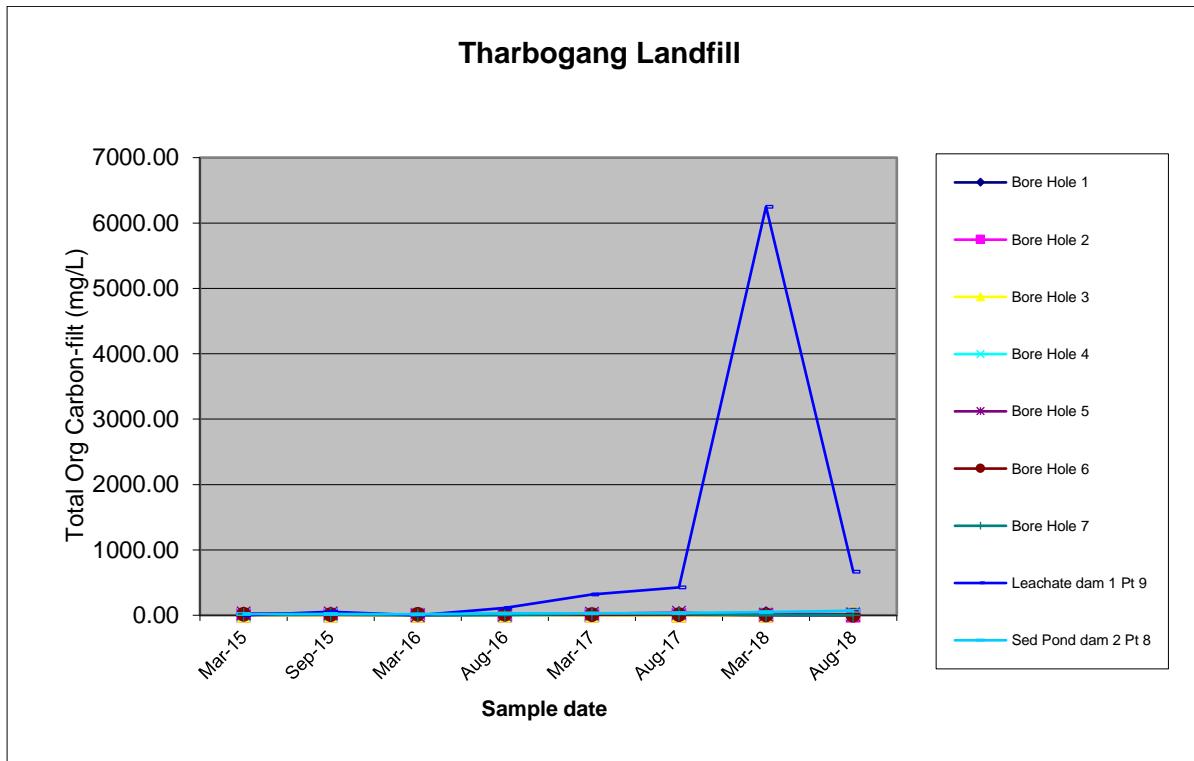

Comments: Sulphate rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-6 Sp. Conductance (us/cm)

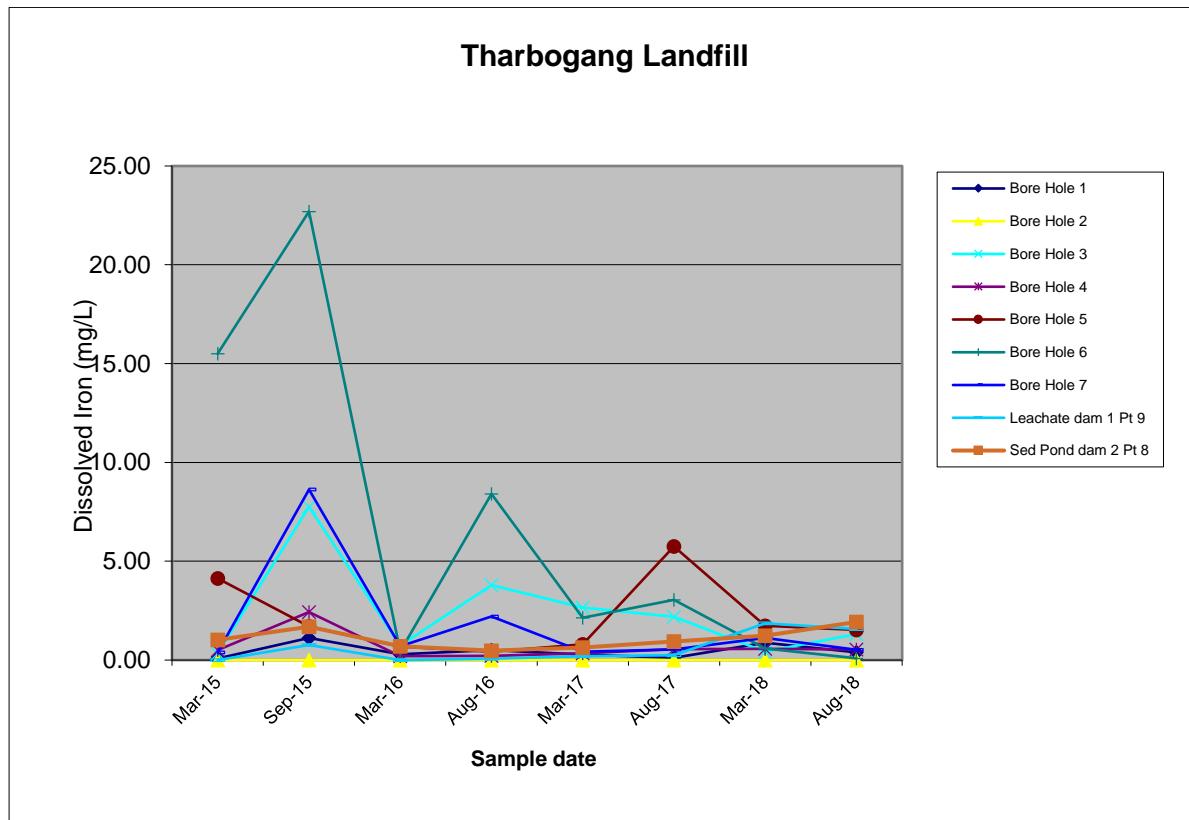

Comments: Conductivity rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-7 Total Org Carbon-filt

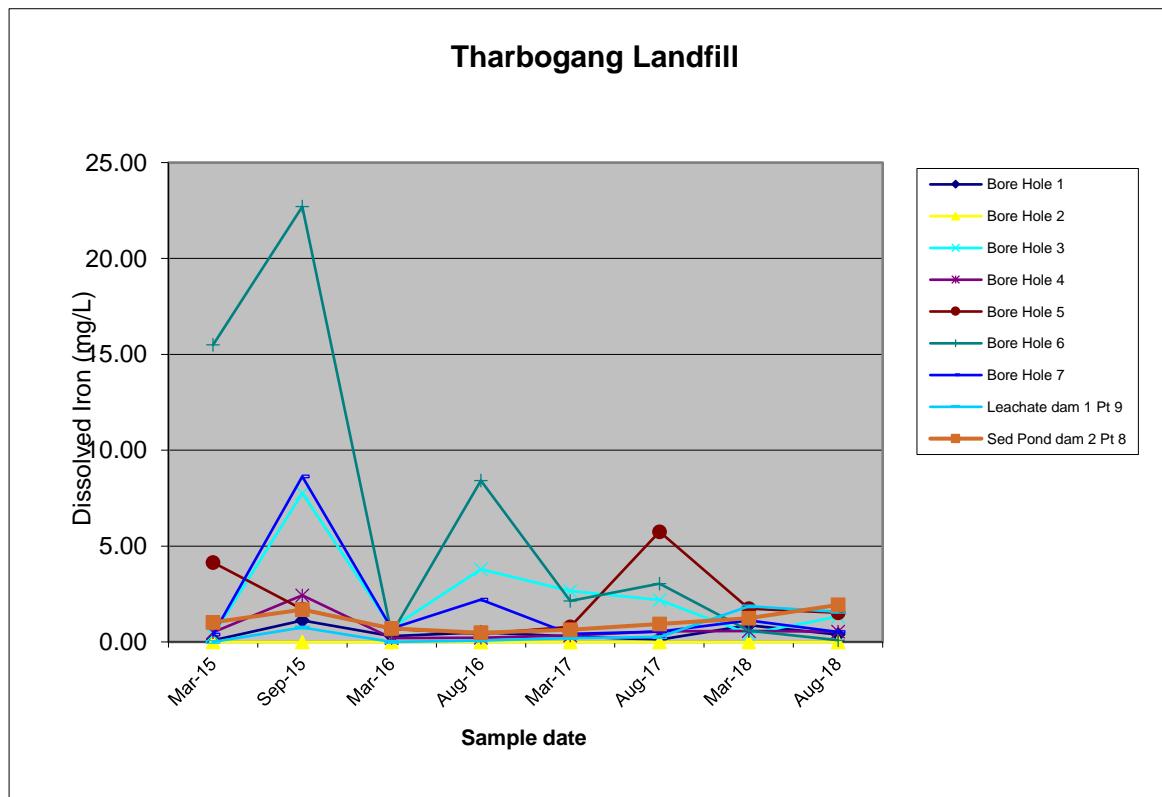

Comments: TOC rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-8 Dissolved Iron

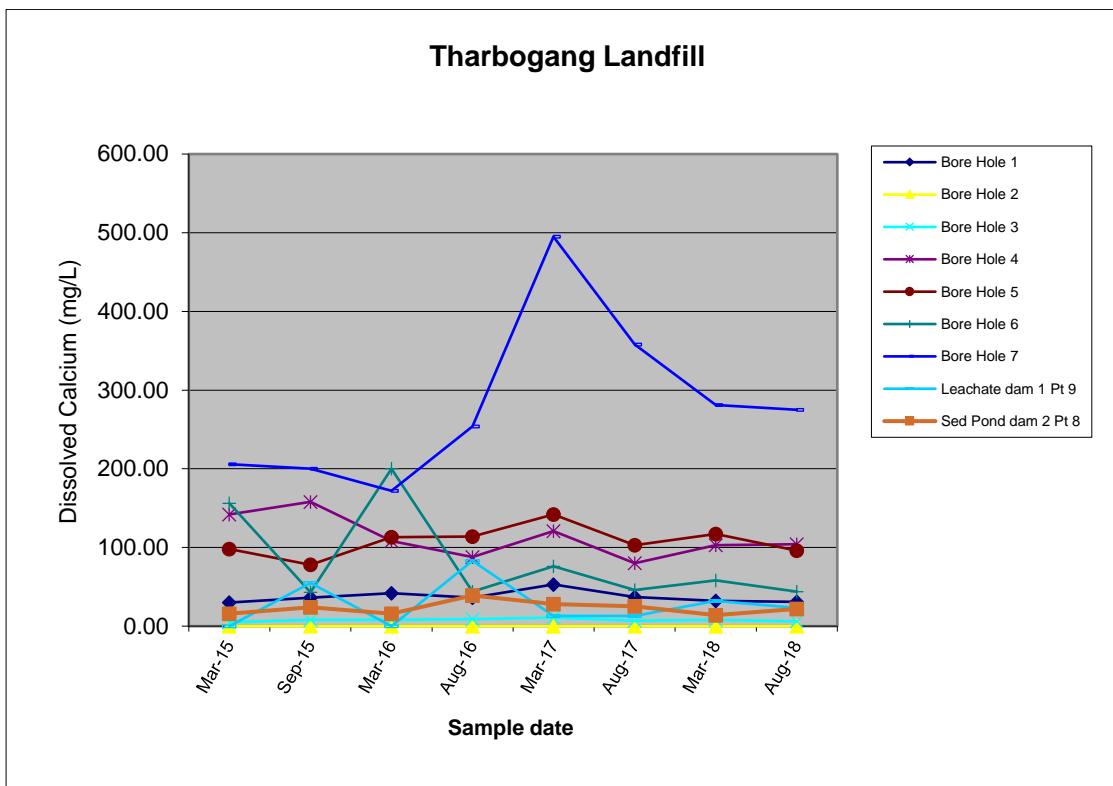

Comments: None

Graph 2-9 Dissolved Iron

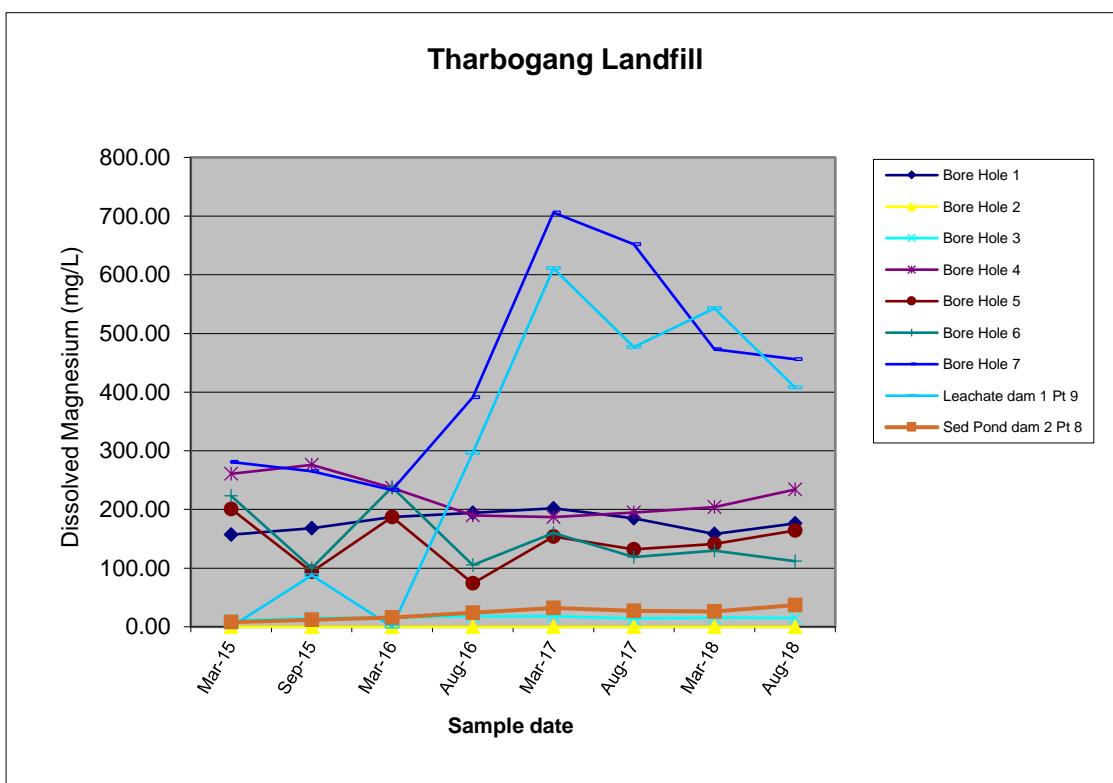

Comments: None

Graph 2-10 Dissolved Calcium

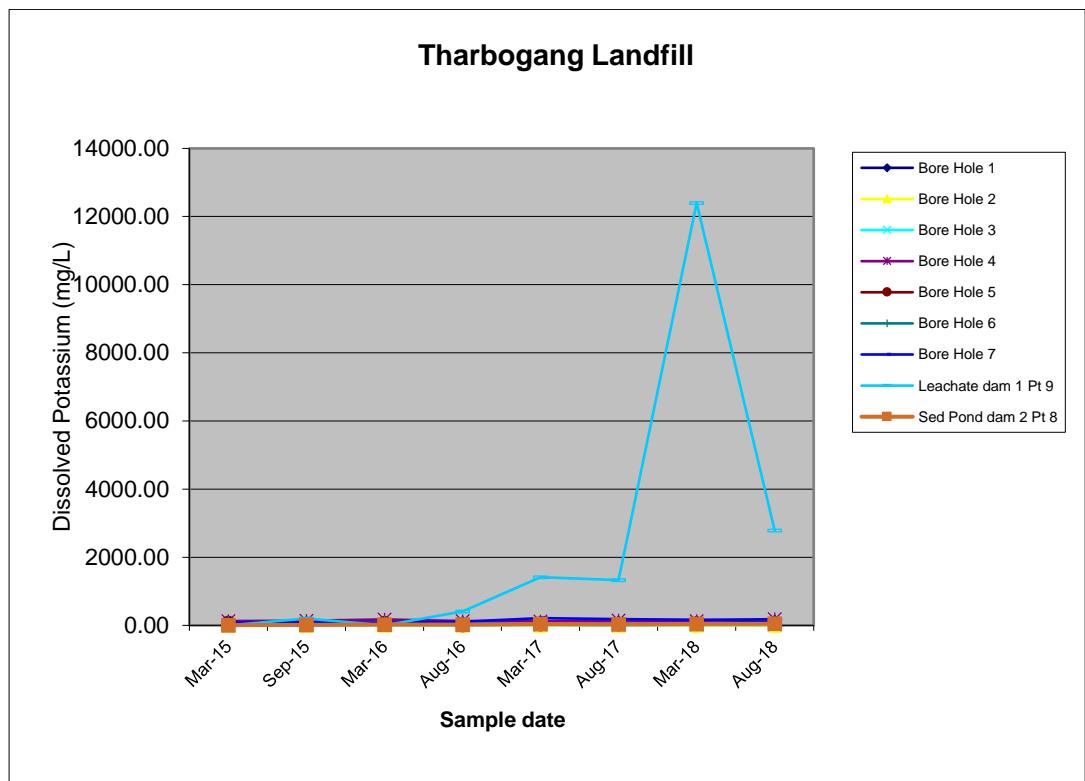

Comment: Dissolved calcium in EPA points 7 and 9 continued to reduce from highs in 2017.

Graph 2-11 Dissolved Magnesium

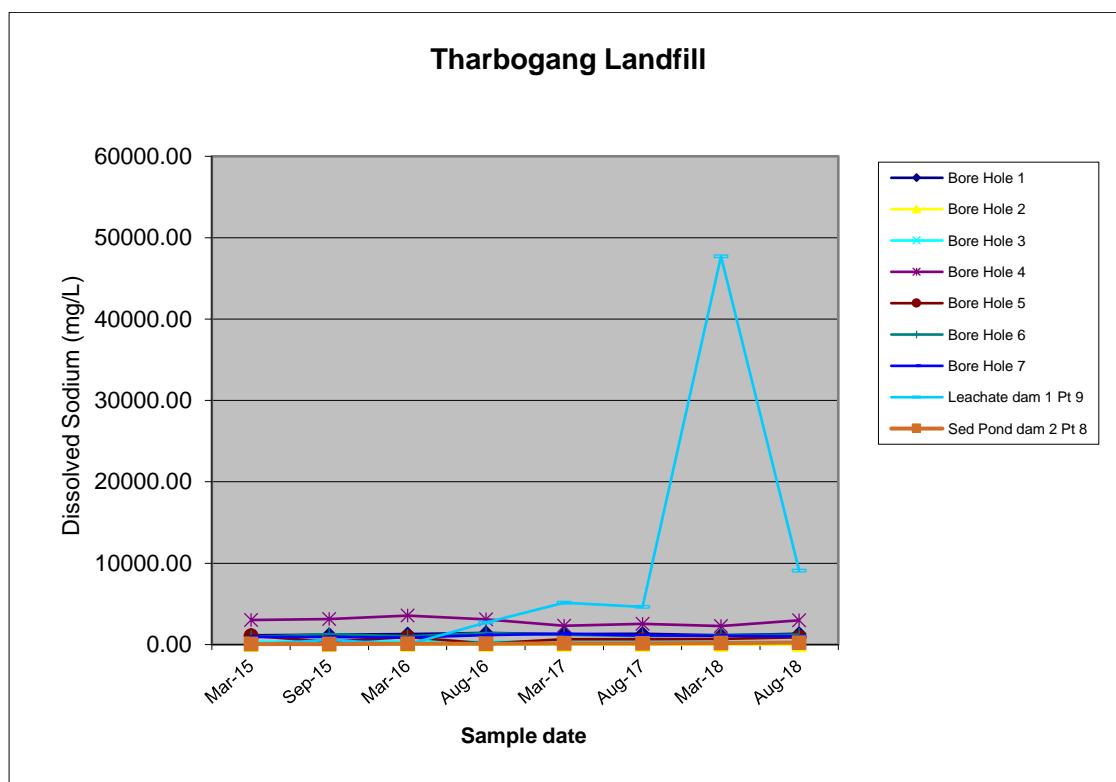

Comment: Dissolved magnesium in EPA points 7 and 9 continued to reduce from highs in 2017.

Graph 2-12 Dissolved Potassium

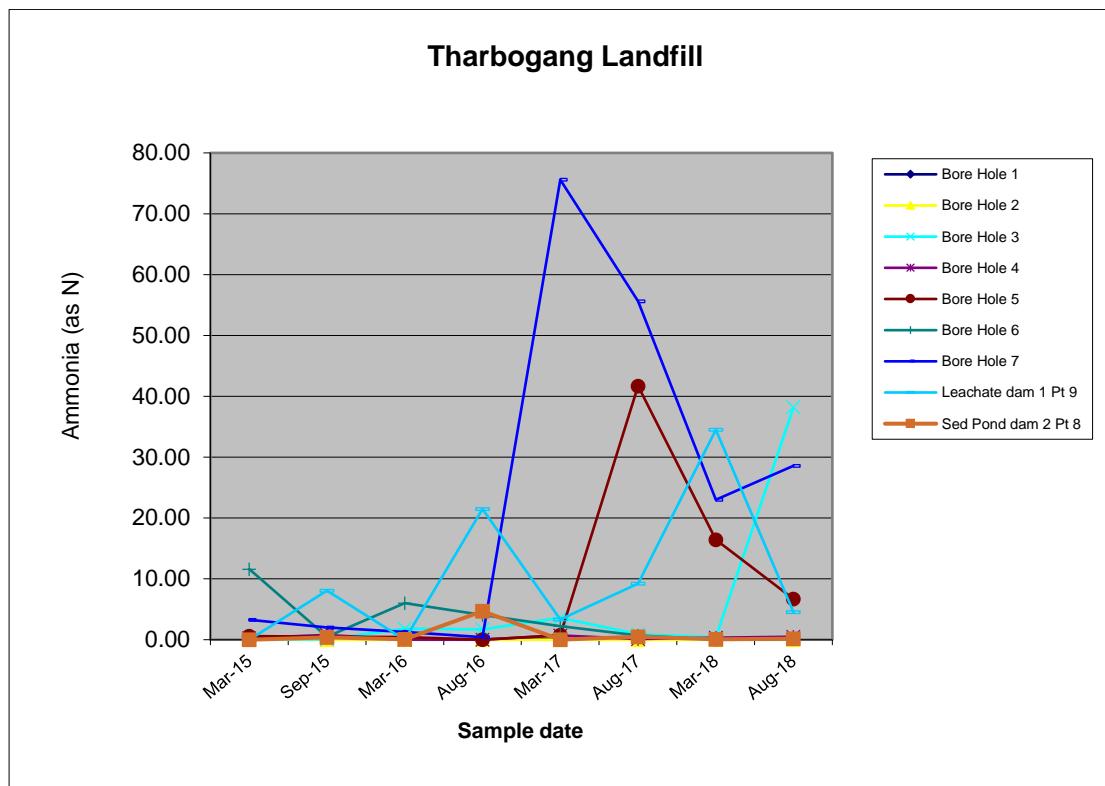

Comment: Dissolved potassium rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-13 Dissolved Sodium

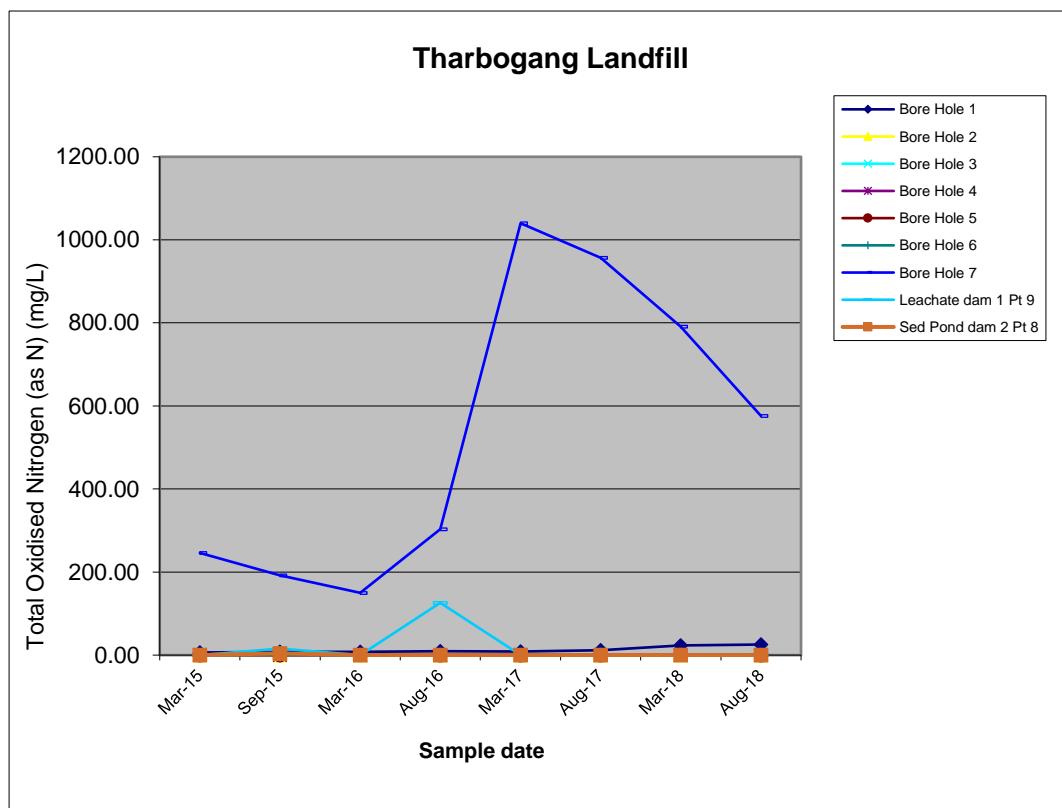

Comment: Dissolved sodium rose in March 2018 at EPA point 9 and returned closer to typical levels in August. There was no specific event that caused this.

Graph 2-14 Ammonia

Comment: Ammonia rose in August 2018 at EPA point 9 there was no specific event that caused this.

Graph 2-15 Total Oxidised Nitrogen

Comment: Total oxidized nitrogen continued to reduce during 2018 at EPA point 9.

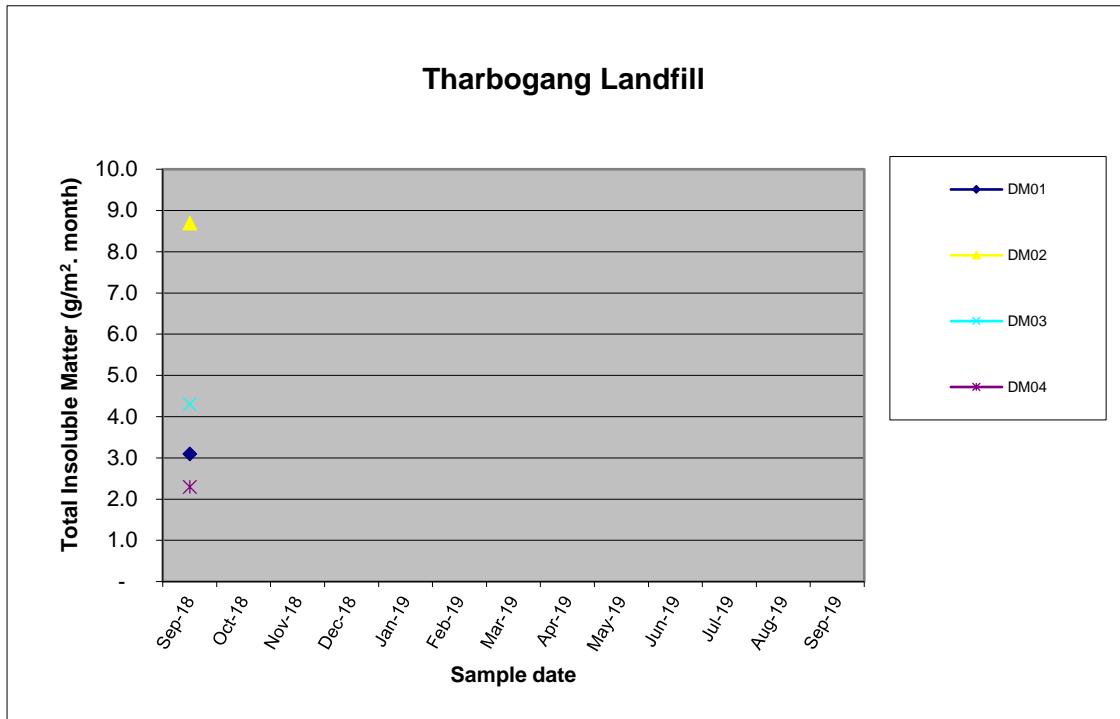

- d) See comments above.
- e) There were no complaints received during the reporting period.
- f) There were no environmental performance deficiencies identified in the data.
- g) Based on the results, there are no specific recommendations.

3. Air Quality Monitoring

As part of the Development Approval 06_0334, it is a requirement that the quality of the air is tested at 4 sites which are across TWMC. (See map below, Figure 3.3, showing monitor location).

The first testing commenced in September 2018. Please see the graphical representation of the testing results.

4. Blast Monitoring Results

Every time there is a blast in the quarry the Over Pressure and Ground Vibration is monitored at the closes receptor (nearest property).

The results of this monitoring is graphed below. It is important to note that none of the blast exceed the 120dB (Lin Peak) limit for Over Pressure and the 5mm/second for ground vibration.
