

Important

The way we track hazardous and high-risk waste has changed

Waste generators, transporters and receiving facilities have regulatory responsibilities to track the transport and disposal of hazardous and other high-risk wastes into, within and out of NSW.

You should now use the Integrated Waste Tracking Solution (IWTS) to track hazardous waste, asbestos and waste tyres. The IWTS has replaced the Online Waste Tracking system and WasteLocate.

Scan the QR Code for more information about the IWTS and waste tracking in NSW or call 02 9585 6303.

Tracking the transport and disposal of high-risk or hazardous waste helps to reduce illegal dumping and harm to the environment and human health.

If you suspect someone is doing the wrong thing, contact **Environment Line** on **131 555**.
