Residents - Businesses

**Wanted:** People willing to remove  
seedlings in all areas when seen

**Contact Council & Register Support**

## **PRICKLY PEAR & SEEDS**

Harvesting all the fruit will greatly reduce the available fruit for birds to transport to new locations, and establish new infestations

**The Images above:** show fruit that have been eaten by birds and transported and deposited to new locations, this can be a few hundred metres away or kilometres away; and to all points of the compass; **Seeds fertilised and ready to germinate**

**New seedlings:** can be found under trees, power lines on roadside reserves, supply/drainage canals, **Most** go unnoticed until they start to dominate in height - against native grasses and other vegetation

These single plant infestations can be easily removed; upto a metre in height and disposed of completely – **We only need to make the effort!**

**THE DO NOTHING OPTION: “IS NOT AN OPTION”**

**COMMUNITY INVOLVEMENT – ESSENTIAL 4 SUCCESS**
